

# Apple Device Administrators Meeting (ADAM) MT 2018

## Agenda

Ben Goodstein - Things you just Mojave to know

Christopher Beard - Test Box Special: macOS Testing in  
a VM and Other Options

# Things You Just Mojave to Know (Admin Gotchas for macOS 10.14)

Ben Goodstein - Technical Leader (Apple)

Endpoint Device Management Services, IT Services

# mac OS 10.14 Mojave

- Released October 2018
  - 10.14.1 Released November 2018
  - 10.14.2 currently in beta

# APFS

- Now enabled on all drives
  - SSD (10.13)
  - HDD
  - Fusion

# Certificate Trust

- MD5-signed leaf certificates untrusted
- Symantec CAs untrusted
- Federal Common Policy Root CA removed

# Proxy PAC

- FTP and File URL Deprecated
- HTTP/S only

# 32-bit processes

- Continue to warn (since 10.13.4)
- Last version of macOS to support

# Kickstart (Apple Remote Desktop)

- kickstart command can no longer switch on remote control  
or can it?

# Single User Mode

- Won't work on T2 Macs with Secure Boot enabled
- Boot into Recovery instead

# Certificate Transparency

- To be introduced in macOS 10.14.2
  - TLS certificates issued after October 15, 2018 must meet Apple's CT policy
  - Config profile will be available to tweak (does not require MDM/DEP)

# TCC (Privacy Preferences)

- "Transparency, Consent, and Control"
- Been around for a while - SIP under 10.13
- 10.14 gets serious
  - Popups (like iOS) for devices & file access
  - Can be controlled with a profile - only UAMDM
